

IMPORTANT NOTE: The transversal struts are for avoiding false trips of the metal detector. These struts „shortcut“ the moving metal of the rollers/drums. The struts can have any shape, like round, L or T. They must be WELDED from right conveyor frame side to left side.

SHARK® TU 1000x0250 Installation

How to modify the conveyor

METAL SHARK® BD

METAL SHARK® TU

As a manufacturer Cassel is committed to highest standards of quality. For more than ten years our goal has been to ensure the quality of your products. Our reputation has been earned by protecting yours. We supply customers in different industries worldwide such as Foods, Plastics, Pharmaceuticals, Textile, Timber and Mining. Our headquarters and state of the art manufacturing facility are located near Hannover in the heart of Germany. Each year we manufacture and deliver over 1000 metal detection systems. Approximately 80% of the production is heading for export markets. To ensure you get the very best of service and support wherever on the globe you are using our metal detectors, we have a worldwide network of partner agents.
